Leading developers of mobile, web and wearable applications.

Are you looking for an experienced application development partner?

YOU'VE COME TO THE RIGHT PLACE.

Developing for the future.

Our talented creative team develops custom solutions and products that leverage current mobile/tablet computing and powerful emerging technologies. We are committed to developing innovative application experiences for our clients. BrickSimple developers thrive on challenging technology problems and devising robust scalable solutions.

BrickSimple has been building software products and solutions since 2002. With clients ranging from the Fortune 500 to start-up companies, we are recognized as one of the leading boutique mobile and wearable application developers in the United States. While some firms have just begun working with these technologies, our mobile application development portfolio spans nearly a decade.

MOBILE

◆ Android

BrickSimple has been developing on the Android platform for more than five years and created some of the earliest applications on Google Play. Apps created by BrickSimple have been featured online by Google, featured on Google Play and even **shown at Google's international I/O event**. With a rich portfolio, BrickSimple has developed applications for Android-based phones, tablets, e-readers, Google TV, and even Google Glass.

 iOS

We have extensive experience with iOS as an original early seed for the Apple iPhone SDK. Applications created by BrickSimple have been listed as "Featured" in the App Store and have been included in the Apple "Billion Apps" advertising campaign and store displays. BrickSimple developed apps have been downloaded from the App Store more than **10 million times**.

WEB

Modern HTML5, Responsive, Mobile-First, Cross-Platform

From mobile-optimized web sites/applications to robust web service architectures, BrickSimple has the skills and experience to build the next generation of web applications. While some companies build "web pages", our expertise is robust web applications and architecture designs that **scale to millions of users**.

The BrickSimple team has been working with website development and HTML technology since NCSA Mosaic. Our developers were **building and deploying AJAX applications a full year before the industry even named the technique**. More than ten years ago, we introduced the first full-stack XML web application platform that cut development time by 70%. That product, Foundation Suite, was sold to a venture-backed company in 2006.

NEXT-GEN

Wearables, VR, Drones, Cubesats

From drones and satellites to virtual reality experiences, we pride ourselves on being at the forefront of new technology. We have a **full stack of in-house talent to realize VR experiences**. Our studio includes 3D artists, animators, and modelers, game developers with formal education (Digipen, Full Sail), and software developers with deep Windows and Android experience. We are currently working on real-world photosphere driven experiences with navigation, dynamic 3D model driven experiences, particle effects, physics and modern game engine features.

Det Ansinn
President and Founder

Detlev Ansinn ("Det") has been writing software for more than 30 years with almost 20 years applying his expertise as a serial entrepreneur. Det founded BrickSimple in 2002 to create a software development company with a focus and commitment to innovation. Under Det's leadership, BrickSimple has built a reputation for being able to execute the most sophisticated web-based and mobile applications. Det has been invited to the White House several times as an advocate for small business and keeping information technology jobs in the United States. On business and technology issues, Det is a regular conference speaker and panelist with a reputation for a high energy speaking style.

A unique work environment.

The BrickSimple headquarters is located in a penthouse in the heart of historic downtown **Doylestown**. Our open office environment supports creativity and communication with a rooftop deck for fresh air, meetings, and conversation. Employees enjoy lunch daily at a variety of quality dining establishments around town. That is, unless it's Friday, where employees are treated to free pizza and a tech talk on the topic of the week. We may be located in a great rustic small town, but BrickSimple is less than an hour from Philadelphia and an hour and a half from New York City.

On the west coast, the BrickSimple West office is located in the Innovation Hangar at **San Francisco's** historic Palace of Fine Arts. It's a great place to build new ideas where art and technology meet right in the heart of San Francisco. For the southeast, BrickSimple also has a presence in **Myrtle Beach, SC**.

At all of our offices, we're stocked with the latest next gen and emerging technology. We have a full suite of mobile and VR devices to test on and fully loaded Macbook Pros for primary development. As gadget-lovers, it's not uncommon for a drone to be heard buzzing around our offices, a 3D printer printing away, a 3D camera capturing a new experience or a VR headset running our latest work.

Want to join our team?

BrickSimple is actively hiring/recruiting mobile web and application developers for our team. We offer competitive pay, excellent benefits, and a unique work environment. We're currently hiring for the positions below.
